Preface	IV
Preface by Dr. Franz Alt	V
Preface by Dr. Hermann Scheer	VIII
1 Introduction	1
1.1 World's Energy consumption	1
1.2 CO ₂ -emissions by humankind	2
1.3 Global warming by CO ₂	4
1.4 Measures of CO ₂ -diminution	7
1.5 Conventional and renewable sources of energy	8
1.7 Approach	14
1.7.1 Production	14
1.7.2 Yield	14
1.7.3 Balance	14
1.7.4 Optimization	14
2 Photovoltaics	15
2.1 Brief History	15
2.2 Photovoltaic Effect	16
2.3 Photovoltaic Generator	22
2.3.1 Electrical properties	23
2.3.1.1 Equivalent electrical circuit	24
2.3.1.2 Bypass diodes	25
2.3.1.3 Electrical Terminals	26
2.3.1.4 Parallel Strings	26
2.3.2 Mechanical properties	28
2.3.2.1 Sandwich lamination	28
2.3.2.2 Framing	28
2.3.2.3 Fixing and mounting	28
2.4 Properties of PV generators in operation conditions	30
2.5 Mounting of PV Modules	31
2.6 Future Development of Photovoltaics	32
2.7 Research Funding for Photovoltaics	34
2.8 Market development of Photovoltaics	35
3 Inverters	39
3.1 Autonomous operation	39

3.2	Inverters for electrical grid injection	40
3.3	Types of inverters	43
3.3.1	External commutated inverters	43
3.3.2	Self commutated inverters	43
3.3.3	Inverters based on PWM	43
3.4	Electrical grid connection	44
3.4.1	Voltage levels of electrical grids	44
3.4.2	Boundary values of electrical grids	45
3.4.3	Long-distance transport (conveyances) of electricity	45
4	Storage	47
4.1	Lead sulphide acid battery	48
4.1.1	Principle	48
4.1.2	Gassing	48
4.1.3	Specific Gravity (SG)	49
4.1.4	Operating temperature	49
4.1.5	Self discharge	50
4.1.6	Deep discharge	51
4.1.7	Sulfatation	52
4.1.8	Battery types	52
4.2	Other type of batteries	54
4.2.1	Nickel Cadmium Battery	54
4.2.2	Nickel Hydride batteries	54
4.2.3	Lithium Ion batteries	55
4.3	Fuel cells	57
5	PV-Systems in the Tropics	59
5.1	Pre-installation issues	59
5.1.1	Additional considerations for planning	59
5.1.1.1	Determination of load requirements	59
5.1.1.2	Dynamics of project development vs. time constrains	59
5.1.2	Financing	60
5.1.3	Importation	60
5.1.4	Language barriers	60
5.2	Technical issues	61
5.2.1	Mounting	61
5.2.1.1	Fixation of PV modules	61
5.2.1.2	Wiring of PV generator	61
5.2.1.3	Theft prevention	61
5.2.1.4	Safety considerations	61

5.2.2	Non-MPP operation of PV generator	62
5.2.3	Energy storage	62
5.2.3.1	Battery types	62
5.2.3.2	Nominal voltage level	62
5.2.4	Power conditioning equipment	63
5.2.4.1	Switching devices	63
5.2.4.2	Ventilation	63
5.2.4.3	Charge-controllers	63
5.3	Operation and maintenance	63
5.3.1	Pollution and degradation of system components	63
5.3.2	Monitoring	64
5.3.3	Further Recommendations	64
5.4	Concluding remarks for PV in the tropics	64
6	Energy Consumption for the set-up of a PV power plant	65
6.1	Preliminary remarks	66
6.1.1	Differentiation of the model-cases	66
6.1.2	Equivalent Primary Energy Consumption	66
6.2	Preparation of raw materials for production	66
6.2.1	Development of a deposit	67
6.2.2	Release (Exploitation)	67
6.2.3	Transport	68
6.2.4	Preparation for production	69
6.2.5	Construction work and buildings	69
6.3	Direct energy consumption at the production process	71
6.4	Production of solar cells	71
6.4.1	Production of technical Silicon (MG-Si)	71
6.4.2	Metallurgical-grade Silicon (MG-Si) to semiconductor-grade Poly-Silicon (EG-Si)	71
6.4.3	Production of single crystalline silicon	72
6.4.4	Semiconductor-grade silicon to multi-crystalline silicon	73
6.4.5	Production of silicon wafers (single- and multi-crystalline)	74
6.4.6	Single-crystal wafers to single-crystalline solar cells	75
6.4.7	Multi-crystalline wafers to multi-crystalline solar cells	76
6.4.8	Production of amorphous silicon solar cells	77
6.4.9	Production of solar cells made of other semiconductors	78
6.5	Production of PV modules	79
6.5.1	Lamination process	79
6.5.1.1	Integrated Laminator	80
6.5.1.2	“Passing Through” Laminator	81

6.5.2	Production of “encapsulated” PV modules	82
6.5.3	Production of “laminated” PV modules	83
6.5.4	Electrical power conditioning	84
6.5.5	Support structure	85
6.6	Installation and taking into operation	86
6.6.1	Transport	86
6.6.2	Installation	86
6.6.3	Setting into operation	86
6.7	Operation expenses	86
6.7.1	Cleaning	87
6.7.2	Maintenance	87
6.7.3	Use of land	87
6.8	Dismantling	88
6.8.1	Dismantling	88
6.8.2	Transport	88
7	Energy yield	89
7.1	Model to determine the cell reaching irradiance	89
7.1.1	Sun’s position relative to Earth’s surface	89
7.1.2	Way of Sun’s irradiance through the Earth’s atmosphere	92
7.1.2.1	Solar Constant	92
7.1.2.3	Direct irradiance	95
7.1.2.4	Diffuse irradiance	95
7.1.2.5	Albedo	98
7.1.2.6	Angular distribution of yearly irradiance in central Europe	99
7.1.3	Optical model of module encapsulation	100
7.1.3.1	Optical interface at boundary layers	101
7.1.3.2	Optical transmittance of a plane slab	104
7.1.3.3	Internal transmission and reflection	106
7.1.3.4	Transmittance through two slabs	107
7.1.3.5	Transmittance through three slabs	109
7.1.3.6	Optical transmittance through m slabs	111
7.1.3.7	Simulation results	111
7.2.1	Heat flow input	116
7.2.1.1	Heat flow input by sky and ground radiation	116
7.2.1.2	Heat flow input by ambient temperature	116
7.2.1.3	Heat flow input by irradiance	117
7.2.2	Heat transfer inside a module	118
7.2.2.1	Dimensional layout of the thermal model	118
7.2.2.2	Stationary heat flow in the module	119

	7.2.2.3 Non-steady-state heat flow in the module	120
7.2.3	Heat dissipation	120
	7.2.3.1 Thermal radiation exchange with sky and ground	121
	7.2.3.2 Determination of sky temperature	123
	7.2.3.3 Heat dissipation by natural convection	125
	7.2.3.4 Heat dissipation by forced convection	127
	7.2.3.5 Heat transfer for superposition of natural and forced convection	129
7.2.4	Model calculation	130
7.2.5	Validation of thermal modeling	131
7.3	Electrical Modeling	133
	7.3.1 Current	133
	7.3.2 Other electrical parameters	133
7.4	PV grid injection	134
	7.4.1 Modeling of inverters	134
	7.4.2 Limiting factors for the design of PV power plants	135
7.5	System layouts	136
7.6	Electrical yield of a Reference System	137
8	Energy Input by Dumping and Recycling	138
	8.1 Separation of materials	138
	8.2 Energy Input by Recycling	139
9	Total Energy Balance	141
	9.1 Commutated Energy Expense	141
	9.2 Models for energy balances	142
	9.3 Input-Output-Analysis	143
	9.4 Process Chain Analysis	144
	9.5 CO ₂ reducing effects by the use of PV	145
	9.5.1 Specific emission balance	146
	9.5.2 Effect of PV on reduction of CO ₂ emissions in Germany	146
	9.5.3 Variation of location	148
10	Optimization	151
	10.1 Improvement of irradiance on a solar cell	151
	10.1.1 Improvement of irradiance by tracking the sun	151
	10.1.2 Improvement of cell irradiance by reduction of optical reflection	152
	10.1.2.1 Structuring of the PV module surface	152
	10.1.2.2 Selective Structuring	152
	10.1.2.3 Improved matching of the refractive indices of the module	

	encapsulation layers	154
	10.1.2.4 Additional anti-reflective coating	155
10.2	Reduction of expenses for mounting	156
10.3	Substitution of building components	157
	10.3.1 Solar roof tiles	157
	10.3.2 Solar facades	158
10.4	Thermal Enhancement of PV modules	159
	10.4.1 Real operating cell temperatures under tropical conditions	159
	10.4.2 Preliminary work for the reduction of temperatures in PV modules	161
	10.4.3 Development of a thermally improved prototype	161
	10.4.5 Construction, operation and measurement TEPVIS in Africa	163
	10.4.6 The Integrated Solar Home System (I-SHS)	166
	10.4.6.1 Composition of the system	166
	10.4.6.3 Benefits of the I-SHS	169
	10.4.6.4 Further development	169
11	Summary	170
12	Appendix	172
	12.1 List of Symbols and Abbreviations	172
	12.2 Tables	179
13	Literature	203
